

Shady Emad Sabry Fawzy

Mobile: +201272517828 | **Date of Birth:** 23/7/2002 | **Address:** El Nozha el gededa, Cairo, Egypt

Email: Shadygirgis79@gmail.com | **LinkedIn:** www.linkedin.com/in/shady-girgis-6b0602314

Portfolio: [Portfolio - Shady Emad](#) | **GitHub:** [ShadyGirgis79 \(Shady Emad\) \(github.com\)](https://github.com/ShadyGirgis79)

Experience

- Junior Software Engineer at NexSpec Inc.** **March 2026 – Present**
Contributed to the NexSpec project by developing and improving front-end features using modern web technologies. Focused on building reusable, scalable components, enhancing user interfaces, and ensuring smooth user experience. Worked on optimizing code structure, handling state management, and resolving technical issues to deliver maintainable and efficient solutions within a collaborative development environment.
- Junior React-Native Developer at Kinetics Group** **October 2025 – March 2026**
 - Developed cross-platform mobile features using React Native, JavaScript, and Typescript.
 - Built and styled interactive UI components for both iOS and Android from wireframes.
 - Integrated with RESTful APIs to ensure seamless data flow and functionality within the app.
 - Participated in code reviews, adopting best practices to ensure code quality and maintainability.
 - Utilized Git for version control and worked in an Agile/Scrum environment to deliver features on schedule.
- Software Developer at Nesba Investments** **May 2025 – January 2026**
 - Built and deployed Nesba's mobile app using React Native, delivering seamless user experiences across investment, checkout, and portfolio features.
 - Implemented secure authentication flows with AWS Amplify and managed a PostgreSQL-backed Amplify Gen 2 backend, enhancing security and scalability.
 - Integrated Paymob payment gateway, enabling smooth and reliable in-app transactions for investors.
 - Developed and connected Valify EKYC solutions ensuring Nesba's compliance with fintech regulations.
 - Designed and launched Nesba's responsive website in React; deployed on AWS, ensuring scalability, reliability.
- Coding Instructor for kids at iSchool** **January 2024 – May 2024**
Teach children and teenagers from the age 8 – 18 years basics about coding using scratch and m-block , also teach them machine learning concepts, web development, mobile programming, and how to develop 2D and 3D games.
- Camp Counselor at Well Spring** **December 2022 – June 2023**
Gained experience on how to deal with kids and went on camps with kids and help them learn more about themselves and how to be creative, I helped in many events for teachers and companies for entertainment and help them improve their teamwork skills.

Education

- Faculty of Engineering, Ain Shams University I-CHEP** **2020 - 2025**
Degree: Bachelor's Degree in Computer Engineering and Software Systems **Specialization:** Data Science
GPA: 3.14 – “Very Good with High Honors”
- MODERN SCHOOL OF EGYPT (MSE)** **2008 - 2020**
Certificate of Secondary School (National Education) **Grade:** 97.4%

Internships and Courses

- Konecta AI and Machine Learning Internship **May 2025**
- Nokia Summer Virtual Internship **August 2024**
- Front End Development React.js at ITI **July 2024**
- IT support at Xceed Company **August 2023**
- System Administration at Xceed Company **July 2023**
- AI training at We Company **September 2022**

Languages

English: Fluent | **German:** Good | **Arabic:** Native

Graduation Project with Siemens EDA

- **Application-Specific Deep Learning Accelerator Designer (ASDLA)**

Developed an advanced framework for automating the generation of deep neural networks (DNNs), focusing on complex architectures such as YOLOX. Extended the system to support robust defense layers against adversarial attacks on camera feeds using digital twin simulations. The project involved Python-based implementation, applied design patterns for scalability, and leveraged real-world datasets (e.g., GTSDb) to validate performance and robustness.

Projects

- **Nesba – Real Estate Investment Platform**

Built a cross-platform app using React Native, powered by AWS Amplify Gen 2. Designed and integrated a PostgreSQL backend, implemented Cognito authentication, and developed a custom OCR function for national ID extraction using AWS Lambda and the Valify API. Used S3 storage, real-time data models, and secure access control to manage users, properties, and transactions across web and mobile.

- **Travel Ways Application**

Developing a cross-platform travel booking app built with **React Native**, **TypeScript**, and **Redux Toolkit**, designed to provide users with a seamless experience for browsing, booking, and managing excursions, trips, and hotel reservations. The project focuses on delivering a responsive and efficient interface by implementing robust state management with Redux, ensuring type safety and scalability with TypeScript, and supporting offline access through local SQLite integration synchronized with Firebase Realtime Database.

- **Hedieaty Mobile Application**

Developed a modern mobile application designed to simplify gift list management for special occasions like birthdays, weddings, and holidays. Users can create, manage, and share gift lists, allowing friends and family to view, pledge, and collaborate seamlessly.

The app is developed using Flutter, leveraging Dart programming language for a smooth and engaging user experience on Android devices. It features robust functionality, including Firebase integration for cloud syncing and SQLite for offline support.

- **E-Commerce Web App**

Web development application using ASP.Net. The website sells movies and can be accessed by a user and an admin. SQL Server was used as the database for storing the movie purchases and the user name and password.

- **Compiler for PASCAL programming language**

Developed the Scanner and Parser phases to read PASCAL language by using Python, the compiler also supports error handling. This project aims to establish compilers using modern coding, such as Python, to run legacy coding, such as Pascal.

- **Peer to Peer Chat Application**

Designed, developed, and implemented a Peer-to-Peer chat using Python and MongoDB as a database to store and retrieve the chat texts and users' information.

- **Sudoku Detector and Solver**

Developed a sudoku scanner program that detects the sudoku board and removes all the noise, then uses OCR to recognize the numbers and solve them using Python and Computer Vision techniques.

- **Zuma game**

Implemented in C++, linked lists used as the data structure for the game. The aim of the game is to match the balls color to destroy all balls before reaching till the end. SFML was used for developing the GUI.

- **Automated Teller machine (ATM) Finite State Machine**

These projects represent the hardware verilog description and test bench of the ATM that does multiple ATM operations like withdrawal and Deposit and other operations

- **Single Core Million instructions per Second (MIPS) Processor**

Implemented in VHDL. The processor is used to understand the assembly instructions which are given to it by a user , and preform the required instructions.

- **Power window control system**

Constructing and implementing front passenger to [control](#) door window with both passenger and driver control panels and 2 limit switches to limit the window motor from the top and bottom limits of the window using FreeRTOS on TIVA C.

- **Li-Fi Project**

Developing a Li-Fi-based communication system which involve setting up a simple transmitter and receiver setup using sensors like smoke sensor , ultrasound sensor , magnetic sensor.

- **Minix Operating System**

Implementing hierarchical paging instead of single page table in Minix OS, implemented in C programming language

Activities

- Scout Leader at Michael Angel Church
- Frisbee player at Flicking Pharaohs
- Work voluntarily with TWNAF “The World Needs A Father”
- Was a member in the Media department at Racing Team Club at Ain Shams University
